SUMMARY

Spent the last 3+ years building financial software that handles real money like Core Banking Systems (CBS), Loan Management Systems (LMS), Payment Gateways, and SWITCH. Worked across the full stack at FinTech startups in India and Dubai, shipping everything from merchant dashboards to the backend systems that sit behind payment gateways. Outside of work, I build and run apps in production with end-to-end ownership across development and deployment.

SKILLS

Languages & Frameworks

TypeScript ReactJS/Redux NextJS NodeJS Python Java JavaScript/jQuery HTML5/CSS3

Databases & APIs

MongoDB MySQL REST API AI-Assisted Development MCP Servers PostgreSQL Redis

Infrastructure & Tools

AWS Git/GitHub Copilot Docker Microservices CI/CD Hosting & Deployment

Soft Skills

Project Planning Problem Solving Prompt Engineering Communication Adaptability

EXPERIENCE

Omnis Solutio Pvt Ltd

Full Stack Engineer

November 2025 – Ongoing

Dubai, UAE

- Helped build and scale the merchant ecosystem for a payment gateway by developing dashboards, checkout systems, SDKs, and CMS integrations, used by businesses for online payments. Researched about transaction lifecycles, settlements, refunds, wallets, and switch-based card processing systems.
 - Built a fully dynamic, backend-driven frontend architecture so most future UI changes could be handled through database/config updates, minimizing the need for frontend redeployments. Designed a configurable theming layer that supports future white-labeling by changing branding elements such as logo, font, and color scheme through configuration.
 - Researched plugin ecosystems across CMS and commerce platforms such as WooCommerce, WordPress, Shopify, and Wix from both product and business perspectives. Performed competitor analysis and proposed a practical implementation strategy for building the plugin solution in a scalable way for the company.
 - Worked on the company's global web platform with dynamic country-based experiences, localization flows, and region-specific content delivery across 6 different countries.
- Tech Stack: TypeScript, ReactJS, NodeJS, JavaScript.

Golden Legand Leasing and Finance

Full Stack Engineer

July 2024 – November 2025

Mumbai, India

- Enterprise Web Development: Led the design and full-stack development of 4+ organizational websites using ReactJS, TypeScript, and NextJS, ensuring responsive and high-performance UI delivery.
 - Codebase Cleanup, Best Practices: Took the initiative to audit and refactor large portions of the codebase across 3 projects. This included organizing structure, improving readability, and adopting modern best practices for maintainability.
 - Mentored 10 team members on React and Git workflows, and documented internal best practices to improve onboarding and development consistency.
 - LMS Payment Gateway Architecture: Developed the backend REST APIs using Java and PostgreSQL to support a comprehensive Loan Management System (LMS) and secure payment gateway integrations.
- Tech Stack: TypeScript, ReactJS, NodeJS, NextJS, Firebase.

- Optimized the UI of the Core Banking System (CBS) application using ejs, JavaScript, and jQuery for Turing 3.0. Led the migration of Turing 3.0 UI to React. Developed a drag-and-drop form builder that reduced UI development time by enabling non-React users to create and manage forms independently.
- Led a team of 5 in designing Turing 4.0's UI, focusing on visually appealing and user-friendly interfaces, and contributed to back-end development using Java and MySQL.

Tech Stack: ReactJS, NodeJS, Java, JavaScript/jQuery, HTML/CSS

PROJECTS

Agentic AI for connecting to marketing workflows.

- Built the core engine for an Agentic AI platform that connects different marketing and sales ecosystems into a single intelligent decision-making layer.
- Developed integrations across CPaaS platforms, CMSs, and CRMs to continuously collect, synchronize, and maintain contextual customer data.
- Created AI-driven systems capable of predicting customer intent, identifying next-best actions, recommending products, and forecasting potential customer exits/churn.

Tech Stack: Python, nltk, spaCy, GoLang, NodeJS

E-Commerce Platform for a Diamond Trading Company.

- Helped build an e-commerce platform for a diamond trading business focused on simplifying online product discovery and trading workflows.
- Developed core platform features for catalog management, customer interactions, and business operations.
- Built responsive frontend features and business workflows for product browsing, inventory visibility, and transaction management. Assisted in integrating backend services and APIs to support core e-commerce functionality and data flow.

Tech Stack: ReactJS, NodeJS, PostgreSQL

EDUCATION

BE in Information Technology

University of Mumbai

May 2018 – May 2022 | CGPA: 8.7 | Mumbai, India

Masters in Business Administration

NMIMS University

July 2025 – Ongoing | Percentage: 88.6 | Mumbai, India
